Weight-shift control as a means of aircraft flight control is widely used in hang gliders, powered hang gliders, and ultralight trikes. Control is usually by the pilot using his or her weight against a triangular control bar that is rigidly attached to the wing structure.

### **Weight-shift control - Wikipedia**

Ultralight trike. An ultralight trike is a type of powered hang glider where flight control is by weight-shift.[1] These aircraft have a fabric flex-wing from which is suspended a tricycle fuselage pod driven by a pusher propeller. The pod accommodates either a solo pilot, or a pilot and a single passenger.
