Welding . Intro to Welding â€“ A weld is made when separate pieces of material to be joined combine and form one piece when heated to a temperature high enough to cause softening or melting. Filler material is typically added to strengthen the joint. â€“ Welding is a dependable, efficient and economic method for permanently joining similar metals.

under pressure. included spot welding and seam welding, two joining methods widely used today in sheet metal working. Oxyfuel gas welding (OFW). These joining processes use an oxyfuel gas, such as a mixture of oxygen and acetylene, to produce a hot flame for melting the base metal and filler metal, if one is used.

Promising welding techniques and approaches for joining dissimilar materials have been developed as a way to address problems related to traditional joining techniques. Examples of such new emerg-ing techniques are laser welding, ultrasonic weld-ing, friction spot welding, and friction stir welding. The effective application of these processes neces-
